ABOUT ME

Software engineer who likes building clean, reliable, and scalable systems. I enjoy solving complex problems with simple solutions to deliver value for both the business and the users. I work well with teams, keep learning new things, and care about writing code that others can easily understand and maintain.

WORK EXPERIENCE

Software Engineer

PT. Inti Utama Solusindo (Pharos Group)
February 2026 – Present

- Deployed an API gateway as the first step toward microservices and used it to manage multiple services.
- Migrated legacy secrets into HashiCorp Vault.
- Rewrote the Excel product import program using the new architecture, making it scalable and its business logic reusable, which cuts development time for future changes by 60%.
- Reviewed code, mentored other developers, and enforced new coding standards.
- Integrated and created a program to import outlets' products from external services for product creation automation.
- Led a workshop for 20+ developers to introduce the new project architecture and new coding standards.
- Reduced the existing Docker image size by 60% and build time by 40%.
- Automated database migrations during deployments.

Software Engineer (Intern)

PT. Inti Utama Solusindo (Pharos Group)
February 2025 – February 2026

- Designed the architecture for new services and for migrating existing applications, using Clean Architecture and Domain-Driven Design (DDD).
- Built a DICOM service that tracks clinic ultrasound usage and automatically converts results into images.
- Teamed up with DevOps and IT support teams to set up ultrasound machine in a clinic.
- Deployed Evolution API for WhatsApp automation and an SFTP server linked to Google Cloud Storage for external file exchange.
- Collaborated with QA teams to resolve bugs and improve software quality.
- Set up and integrated Sentry across services and web apps to improve error monitoring.
- Developed reusable Next.js and Flutter widgets (e.g., chat) by integrating Chatwoot as the base chat engine and Jitsi for video call integration.

EDUCATION

Computer Science

Bina Nusantara University
2022 - 2026

Bachelor of Computer Science (S. Kom)
Cumulative GPA of **3.93** / 4.00

SKILLS

Programming Languages: Go (Golang), Java, JavaScript, TypeScript, Python, PHP, Dart

Backend Frameworks: Echo, Chi, Spring Boot, FastAPI, Laravel

Frontend and Mobile: React, Next.js, Flutter

Databases: PostgreSQL, MySQL, Redis

DevOps and Cloud: Git, Docker, Linux, Kubernetes, Jenkins, Google Cloud Platform, HashiCorp Vault, GitLab CI, Helm, Nginx

---

PROJECTS

Shunda Flavor Nusantara Company Profile

shundafood.id

B2B company website for a food and beverage raw material supplier, with product catalogs, brand pages, a contact page, English and Indonesian support, and a CMS for content updates.

Technology used: Next.js, PayloadCMS, Nginx, Rclone, PostgreSQL

Courtly

GitHub

Mobile app for booking sports fields. Users reserve a field from their phone, without visiting the location or messaging on WhatsApp.

Technology used: Golang, Flutter, MySQL

Job Jive

GitHub

HR management website for tracking attendance, storing employee data, and supporting HR decisions.

Technology used: Golang, Laravel, MySQL
